Independent Application Activity – Midterm Culminating Task

Course/Section	3-CS3
Student Name	Maui M Comia
Date	October 02, 2026

A. Problem Identification

• System/Application:
Student Enrollment System

• Target Users:
College students who enroll in subjects each semester and registrar staff who manage enrollment records.

• Problem/Usability Issue:
Many enrollment systems contain too many forms, unclear instructions, and confusing navigation. Students may struggle to find subjects, review schedules, and determine whether their enrollment has been completed successfully.

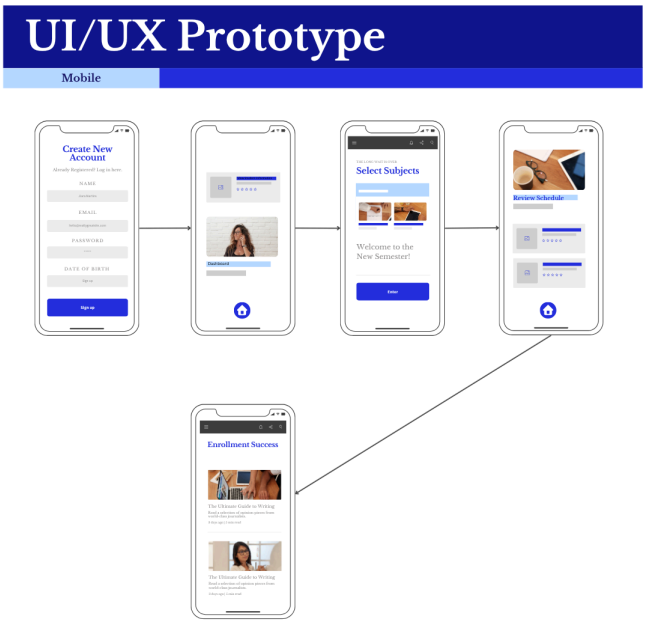

• Why it matters:
A confusing enrollment process can waste time, cause subject selection errors, and create unnecessary stress. A simple and organized interface helps students complete enrollment faster and more accurately.

B. User Flow

User Flow

01
Login
02
Dashboard
03
Select Subjects
04
Review Schedule
05
Confirm Enrollment
06
Enrollment Success

C. UI/UX Prototype

D. UI/UX Principles Applied

Principle	Where and how it was applied
1. Consistency	The same blush pink buttons, font style, and layout are used across all screens.
2. Visual Hierarchy	Important buttons such as "Enroll Now" and "Confirm Enrollment" are larger and more visible.
3. Clear Navigation	Users can easily move between screens using clear buttons and page titles.
4. Feedback / Visibility of Status	The Enrollment Success screen confirms that enrollment was completed successfully and displays a reference number.
5. Simplicity (Minimalism)	Each screen focuses on one task to reduce confusion and make the enrollment process easier to follow.
6. Readability and Contrast	Dark text on light backgrounds and proper spacing improve readability and make information easier to understand.

E. Self-Evaluation

• Easy to use:
The Review Schedule screen is easy to use because students can check their selected subjects and total units before confirming enrollment.

• Would improve:
The Select Subjects screen. With more time, I would add filters for departments, schedules, and subject categories.

• Explanation:
My main goal was to make enrollment simple and easy to follow. Additional filtering options would help students find subjects more quickly.

Final Checklist

✓ I identified a clear system/application and target users.

✓ I identified a specific user problem.

✓ I created a logical user flow.

✓ I created 3–5 connected screens.

✓ I applied at least five UI/UX principles.

✓ My design has clear navigation and readable content.
